NAJBOLJŠI IZBOR

**LINIJA L'ORTOLANO - SEME ZA TISTEGA, KI
ŽELI NEKAJ VEČ!**

Izbor kakovostnih semen vrtnin, zelišč ter stročnic v manjših pakiranjih, namenjen manjšim pridelovalcem. Seme je termalno pakirano v alu vrečke, kar zagotavlja dobro kakovost in kaljivost v daljšem časovnem obdobju. Opremljene so z opisi sort ter podatki o setvi in vzgoji, tudi v obliki simbolov. Vrečka je namenjena prodaji v marketih, cvetličarnah, specializiranih vrtnih centrih in združnih trgovinah.

(*Lattuga sativa capitata*)

LETTUCE - SALAT LATTUGA MARIJA

SOLATA MARIJA je krhkolistna sorta solate, ki jo lahko sejemo celo leto. Glave so okrogle z nazobčanim listnim robom. Seme kali približno 7 dni. Dobro prenaša poletno vročino pa tudi zimski mraz. Dobro uspeva v soseščini kapusnic, kumar, redkvice, zelene in paradižnika, slabše pa v soseščini peteršilja.

SALATA MARIJA je krhkolistna sorta salate koju možemo sijati tijekom čitave godine. Glave su okrogle sa zupčastim rubom lista. Sjeme klija približno 7 dana. Dobro podnosi kako ljetnu vrućinu tako i zimske hladnoće. Dobro uspijeva u blizini kupusnog jestivog povrća, krastavaca, rotkvice, celera i rajčice, a slabije u blizini peršina.

MEŠANI POSEVKI

Na eni gredici gojimo različne vrste zelenjave, dišavnice ali cvetlice in tako dosežemo bogato in harmonično rastlinsko združbo. Prednosti pa niso samo v dobrih medsebojnih vplivih različnih rastlin, boljša je tudi izkoriščenost gredic in pridelki so večji. Pazimo, da skupaj posadimo samo rastline, ki se dobro prenašajo in da prazno mesto na gredici takoj dopolnimo z drugo rastlino. Prednosti mešanih posevkov so:

- različne vrste rasilin se medsebojno spodbujajo v rasti,
- uspešna kombinacija odganja škodljivce ter preprečuje napade bolezni,
- zaradi hkratne vzgoje rastlin s plitvim in tistih z globokim koreninskim sistemom se tla neprestano rahljajo,
- tla so prekrita z rastlinami, kar zavira rast plevelov,
- mešani posevki spodbujajo življenje v tleh.
